- **Pretreatment Chemicals:**

We offer a full range of coagulants, flocculants (Ameroyal, Praestol & Zetag), filter aids and chlorine removal chemistries (Ameroyla RCR Sodium Bisulfate) to remove colloidal matter and strong oxidants before water contacts the RO membranes.

- **Scale Inhibitors (Ameroyal & Sokolan):**

Our scale inhibitors, which include polymer, phosphonate and polymer blend products, protect RO membranes from a wide range of inorganic foulants, ensuring longer periods of high efficiency water production. Phosphate-free and potable water- approved formulations are also available.

- **Microbiological Control Agents (Biosperse & Generox):**

Our collection of diverse microbiological control agents minimizes the buildup of organic matter, biological organisms and other foulants on the membrane surface, thereby ensuring optimal system performance and reducing internal shearing of RO membranes.

- **Cleaners (Ameroyal & Antispex):**

We also provide acidic and alkaline cleaners for routine RO membrane maintenance. Together, this collection of chemical treatments ensures that membranes operate at peak efficiency and throughput while running longer between cleanings and maximizing useful life.

Clearpointsm Biofilm Detection & Control

The **OnGuard™ 3B analyzer** provides the earliest detection and most accurate measurement of biofilm growth possible in industrial water systems, enabling plant operators to take corrective action before biofilm can cause heat transfer loss or equipment damage. Watch to see how it works.

Its unique features include:

- Ultrasonic sensor that distinguishes soft organic fouling from hard scale
- Ability to track multiple biofilm-related metrics such as thickness and temperature
- Unparalleled measurement sensitivity down to 10 microns

The unique ultrasonic sensor has received third-party validation for biofilm detection.

Onguardtm 3S Analyzer

Impurities in industrial water and process streams can cause scale to form on equipment surfaces and in associated piping. By addressing scale proactively, you can prevent it from affecting system performance and reducing equipment life.

Our revolutionary OnGuard 3S analyzer provides accurate scale measurement in real time and provides advanced warning of potential upset conditions like fouling factor changes. The analyzer uses patented ultrasound technology to detect scale deposition at levels as low as 1 micron, providing unparalleled sensitivity as compared to other scale measurement techniques.

The OnGuard 3S analyzer is proven to provide the following benefits:

- Improved system performance
- Improved asset protection
- Optimized chemical usage
- Reduced costs
- Reduced operator intervention
